SUMMARY

Full stack developer who came up through sales and operations — I build custom business platforms, internal tools, and AI automations that non-technical owners run entirely on their own. Shipped a production e-commerce platform end to end (storefront, custom CMS, inventory, payments, bookkeeping) whose first product drop **sold out**, operated daily by its owner with zero developer involvement.

FEATURED PROJECTS

Wave3 Collective — Production E-commerce Platform & Custom CMS · 2026

Node.js · Express · Vanilla JS · Turso (distributed SQLite) · REST API · Render | wave3collectiveph.com · github.com/jhon-hub-work/wave3

- ◆ Designed, built, and shipped the entire platform solo — storefront, admin CMS, REST API, database, deployment — 100% custom code, no templates. **First production drop sold out.**
- ◆ Race-condition-safe inventory: stock reserved inside DB transactions with payment countdown and auto-expiry — two buyers can never purchase the last unit.
- ◆ Payment-verification workflow (reserve → upload proof → verify → approve) that let the business launch and sell months before payment-gateway onboarding; every sale auto-logs income and expenses with one-click Excel/CSV export.
- ◆ Fully custom CMS + docs, video walkthroughs, and live training — the non-technical owner operates products, orders, content, and money reporting with no developer in the loop.

Salon Booking Platform — Full-Stack Booking & Management System · 2026

React · TypeScript · Tailwind CSS · Node.js · Express · SQLite · JWT

- ◆ Customer booking flow plus an admin dashboard for staff, services, bookings, and invoicing — with automated email notifications and a built-in AI chat assistant.

AI Workflow Automation — Client Automations

n8n · Make · Zapier · OpenAI API · Claude API · Webhooks

- ◆ Lead intake and qualification, automated follow-ups, document processing, and AI assistants integrated into clients' existing CRMs and tools.

EXPERIENCE

Full Stack Developer & AI Automation Engineer — Freelance, Remote · 2026 – Present

- ◆ Building production platforms and automations for business clients: e-commerce, booking systems, dashboards, CRM builds, and API integrations — delivered with documentation and owner training.

Business Systems & Strategy Consultant — Freelance, Remote · 2024 – 2026

- ◆ Designed sales systems, process maps, and operational workflows for founders — pipeline design, scripting, and CRM configuration (GoHighLevel, HubSpot).

Sales Development & Back-Office Operations · 2023 – 2024

- ◆ 200–300 outbound calls per day plus EDI back-office operations — thousands of real customer conversations that now shape how I engineer revenue-facing software.

Customer Service Representative — BPO Industry · 2017 – 2023

- ◆ Six years of frontline support for international clients across voice, chat, and email — high-volume queues, billing and account resolution, troubleshooting, and escalations under strict SLAs.

TECHNICAL SKILLS

Frontend	HTML5, CSS, JavaScript, TypeScript, React, Next.js, Tailwind CSS
Backend & APIs	Node.js, Express, REST API design, authentication (JWT, sessions), input validation
Databases	SQLite, Turso (libSQL), Supabase, schema design, transactions
Cloud & DevOps	Render, Vercel, Netlify, Cloudflare, Git, GitHub, CI on push, domain setup & DNS/SSL management (GoDaddy, VentrailP)
Automation & AI	n8n, Make, Zapier, OpenAI API, Claude API, Gemini, Ollama (local LLMs)
CRM	GoHighLevel, HubSpot, Salesforce — pipelines, routing, sales process design
