PROFESSIONAL SUMMARY

Full stack developer who came up through sales and operations, now building the software that fixes those workflows. Shipped a production e-commerce platform and custom CMS end to end, solo, in about a month - storefront, inventory, payments and bookkeeping - and its first drop **sold out in 5 days**. The non-technical owner runs the entire business on it with **zero developer involvement**. Designs around real constraints instead of imaginary scale: fewer moving parts, correctness where it counts, and documentation as part of the deliverable.

CORE COMPETENCIES

Full Stack Development

Node.js & REST API Design

Custom CMS & Internal Tools

Workflow Automation (n8n)

Transactional Data Integrity

React & TypeScript

Deployment & DNS/SSL

AI-Assisted Delivery

WORK EXPERIENCE

Freelance 2025 - Present

Full Stack Developer & AI Automation Engineer

Remote

- Wave3 Collective - designed, built, shipped and now maintain a production e-commerce platform and custom CMS end to end, delivered with documentation, video walkthroughs and live owner training.
- Dr Young Edit - built the brand site for a Brisbane dermatologist's clinical education practice, automated scheduled newsletter delivery via Kit, and run ongoing content operations: **~20 short-form videos produced per week** plus Instagram management.
- Self-directed builds deepening the same stack: a full-stack salon booking and management system, a workspace-first Chromium browser, and an n8n invoicing pipeline.

Freelance 2024 - 2025

Business Systems & Strategy Consultant

Remote

- Designed sales systems, process maps and operational workflows for founders: pipeline design, scripting, and CRM configuration in GoHighLevel and HubSpot.

Sales Development & Back-Office Operations 2023 - 2024

Sales Development Representative

- 200-300 outbound calls per day plus EDI back-office operations - thousands of real customer conversations that still shape how I engineer revenue-facing software.

BPO Industry 2017 - 2023

Customer Service Representative

- Six years of frontline support for international clients across voice, chat and email: high-volume queues, billing and account resolution, troubleshooting and escalations under strict SLAs.

PROJECTS

Wave3 Collective - E-Commerce Platform & Custom CMS Production

Built solo in ~1 month; the 50-unit first drop **sold out in 5 days** (~PHP 50,000 processed) and the platform has run ~2 months in production. Race-condition-safe inventory reserves stock inside DB transactions with a payment countdown and auto-expiry, so two buyers can never purchase the last unit. A payment-verification workflow (reserve, upload proof, verify, approve) let the business sell months before payment-

gateway onboarding, and every sale auto-logs income and expenses with one-click CSV export. Replaced manual Messenger order-taking that mixed up customers, sizes and prices; the owner estimates ~30 hours a week recovered.

Node.js, Express, Vanilla JS, Turso (distributed SQLite), REST API, Render

Dr Young Edit - Brand Site & Content Operations Client

Public site for a Brisbane dermatologist's clinical education brand: newsletter signup as the primary conversion path and an eight-topic content architecture for a case-based newsletter aimed at GPs and specialists. Kit integrated so her audience receives scheduled emails automatically with no manual send step. Ongoing production of ~20 short-form videos per week, pairing a conventional editor with a code-driven HTML-to-video pipeline.

Kit, CapCut Pro, HyperFrames, Instagram

Obsidian Browser - Workspace-First Chromium Browser Open Source

A browser for builders rather than readers: local-first, keyboard-first, and deliberately not an AI browser - the browser layer works fully with AI turned off. Real workspace isolation via per-workspace Chromium session partitions gives separate cookies, logins, cache and history rather than visual grouping.

Electron, Chromium, Node.js

Invoicing Automation - Internal Pipeline Personal

End-to-end invoice delivery with no human step: an invoice is generated, lands in Google Drive, an n8n watcher fires on the new file, and n8n drafts the client message with the invoice attached. Built against a personal WhatsApp account, which exposes no official API - the engineering problem was a reliable automated hand-off to a channel never designed for one.

n8n, Claude, Google Drive, WhatsApp

Salon Booking Platform Personal

Customer booking flow plus an admin dashboard for staff, services, bookings and invoicing, with automated email notifications and a built-in AI chat assistant.

React, TypeScript, Tailwind CSS, Node.js, Express, SQLite, JWT

EDUCATION

Bachelor of Science, Computer Science AISAT 2016

SKILLS

Languages: JavaScript, TypeScript, Python, HTML5, CSS **Frontend:** React, Next.js, Tailwind CSS, hand-written zero-build CSS/JS

Backend & APIs: Node.js, Express, REST API design, authentication (JWT, sessions), input validation

Databases: SQLite, Turso (libSQL), Supabase, schema design, transactions

Cloud & DevOps: Render, Vercel, Netlify, Cloudflare, Git, GitHub, CI on push, domain setup, DNS/SSL

Automation & AI: n8n, Make, Zapier, OpenAI API, Claude API, Gemini, Ollama (local LLMs), Claude Code as a daily build system

CRM: GoHighLevel, HubSpot, Salesforce - pipelines, routing, sales process design

Content & Video: Short-form video production at ~20/week, CapCut Pro, HyperFrames, Kit, Instagram content management
